

Gartner 2016 Magic Quadrant for Supply Chain Planning SOR

According to Gartner, "a Supply Chain Planning SOR is a planning platform that enables a company to create, manage, link, align, collaborate and share its planning data across a supply chain — from demand plan creation through the supply-side response, and from detailed operational planning through tactical-level planning."

We believe this recognition shows that we are leading the industry in both "Vision" and "Execution", and seeing increased traction in our advanced demand analytics and

automation. According to Gartner, "Magic Quadrant Leaders execute well against their current vision and are well positioned for tomorrow."¹

ToolsGroup made a significant move into the "Leaders" quadrant², up from the 2014 Magic Quadrant, which we believe is due to our:

- Advanced analytics technology for complex planning environments, reflecting ToolsGroup's vision and strategy
- Above average customer satisfaction ratings including 'likelihood to select again' and 'level of business benefits achieved'
- Our international presence and customer base growth
- Effective improvement on clients' service levels and operational efficiency while reducing inventory levels, obsolescence and waste
